Goddess as Nature makes a significant contribution to elucidating the meaning of a female and feminist deity at the beginning of the twentyfirst century. Bridging the gap between the emergent religious discourse of theology discourse about the Goddess and a range of analytical concerns in the philosophy of religion, the author argues that theology is not as incoherent as many of its critics claim. By developing a close reading of the realityclaims embedded within a range of theological texts, one can discern an ecological and pantheistic concept of deity and reality that is metaphysically novel and in need of constructive philosophical, theological and scholarly engagement. Philosophical theology is, in an age concerned with reconceiving nature in terms of agency, chaos, complexity, ecological networks and organismism, both an active possibility and a remarkably valuable academic, feminist and religious endeavour.
